# AristaFlow Spreadsheet Router

---

The AristaFlow Spreadsheet Router enables you to perform your existing Excel communication easier and more efficient. The Excel files previously exchanged via e-mail or network drivers can be exchanged between the participants by the help of the Spreadsheet Router. Operations can be tracked and the data and the contained data can be evaluated. Your processes become more transparent, efficient and effective.

## Mapping and optimizing Microsoft Excel® communication

With our intuitive Spreadsheet Router you can map graphically and control your existing communication channels actively without process know-how. Easy-to-use interfaces help you to define procedures and responsibilities, to assign tasks to process participants and to create input masks based on your existing Microsoft Excel® files.

## Everything at a glance

As a process participant you can see at a glance which tasks need to be completed today, tomorrow and next week. If a Microsoft Excel® file is edited by several participants, you can see the current and all editors involved in the process.

## Editing Microsoft Excel® files made easy

By processing your tasks, you can open the Microsoft Excel® file directly from your workflow client or Microsoft Outlook®, edit and when you're done, save and close everything. Saving and uploading the new data is automatically done for you.

## Graphic evaluation of your data resources

You can evaluate and plot any information from one or various Microsoft Excel® files using a variety of professional diagrams. In addition, you can display statistics about running processes in your department to identify bottlenecks and eliminate them early.

# Modules and prices

---

The modules of the Spreadsheet Router can be licensed and operated in two ways: Software as a Service (SaaS in the Cloud) or on-premises (on-site). With the SaaS option, your Spreadsheet Router instance is operated in the cloud and made available to you via a corresponding company-specific access. In the on-premises option, we provide you with a virtual machine (VM), which you can then operate on your own server. The functionality of the Spreadsheet Router is identical in both license models.

The Licensing happens via a rental model with monthly billing and depending on the number of users.

## Basic modules

The Spreadsheet Router's basic modules include everything you need for a successful implementation and stable operation of your Excel business processes. These include the Spreadsheet Router Server and the Spreadsheet Router Clients.

### AristaFlow Spreadsheet Router Server

The Spreadsheet Router Server is the central component of the Spreadsheet Router.

The Server provides the whole functionality needed for operation. It handles everything related to Excel template management, authentication, user management, data management and process control.

#### Functions at a glance

Management of spreadsheet templates	✓
Administration and versioning of Excel communication paths (Workflows)	✓
Administration of users and permissions	✓
Execution and routing of workflows	✓
Automatic task assignment	✓
Administration of workflow and technical Excel data	✓

### AristaFlow Spreadsheet Router Client

For participants involved in an Excel workflow, the Spreadsheet Router Client is the graphical interface to AristaFlow's process world. In the Spreadsheet Router Client you can see at a glance which tasks are currently pending for you, their deadlines and the urgency you have to deal with them.

Via double-click on a task you can start it and edit the corresponding Excel document. The saving of intermediate results is possible at any time. You can track the current state of your Excel workflow in real time using a graphical workflow model. An administrative area allows you to manage users and create new Excel workflows. Using the analysis view, you can create graphical evaluations on the workflow data and make them available to other users for viewing.

The Spreadsheet Router Client is completely web-based and does not require installation on client-side. For easier interaction between Excel and the Spreadsheet Router Client, we recommend installing the Excel Add-In on client machines.

## Functions at a glance

Start and edit tasks	✓
Real-time monitoring of data and workflows	✓
Create and maintain users, roles and abilities	✓
Creation of graphical Excel workflows	✓
Creation of graphical reports (e.g. bar chart, pie chart, etc.) on the collected data	✓
Overview of running and completed Excel workflows	✓
Search and filter collected Excel data	✓

## Licensing AristaFlow Spreadsheet Router basic modules

The Licensing of the on-premises variant (on-site) as well as the Software as a Service (SaaS in the Cloud) variant takes place via a rental model with a monthly billing. The licence price depends on the number of users (named user). A user is hereby a person for whom an entry is existed in the Spreadsheet Router User Management. This entry is made either manually or automatically e.g. via MS Active Directory, LDAP or other user management systems (possible at extra charge).

Users can be added or deleted at any time. Decisive for monthly license costs is the maximum number of simultaneous named users in one month.

The different selling prices for the SaaS (Cloud) and the On-Premises solution are based on the increased maintenance and support costs for the On-Premises variant.

The functionality of the Spreadsheet Router is identical in both license models.

Prices	
On-Premises	SaaS (Cloud)
7,50 per user / month	7,00 * per user / month

\* plus hosting

## Additional modules

With the aid of the basic modules, you can already cover a large number of scenarios. AristaFlow offers additional modules of the AristaFlow BPM Suite<sup>1</sup> for further process management functionalities. These additional modules expand the basic modules of the Spreadsheet Router at any time. Also the Spreadsheet Router can gradually be extended by additional functions such as multi-level escalation, system activities for example mail dispatch or connectors to third-party systems such as ERP, DMS, CRM, etc.

Your claims are growing, the Spreadsheet Router is growing too!

<sup>1</sup> For more information about additional modules and prices, please abstract to the current AristaFlow BPM Suite price list.

# Maintenance, advancement und support

---

The on-premises and SaaS rental models include all enhanced versions for free.

SaaS customers and on-premises customers, who give AristaFlow the option of remote maintenance, receive their updates automatically. On-premises customers, who cannot access to the internal system, receive their updates by prior arrangement on-site or by an instruction of an internal employee via remote maintenance tool. The time required for this will be invoiced to the customer at the hourly rate applicable at the respective time.

For technical support, contact the Spreadsheet Router Support Portal 24/7. The support cases are processed during the normal business hours of AristaFlow GmbH, Monday to Friday from 9:00 am to 5:00 pm, except on public holidays in the state of Bavaria.

For more information on the terms and conditions of Spreadsheet Router SaaS and on-premises models, see the terms of use on our homepage.
